EDUCATION

Manisa Celal Bayar University, Manisa - Bachelor's Degree in Computer Engineering
SEPTEMBER 2021 - 2026 (Graduated)

Ulubatlı Hasan Anatolian High School
Graduated - JUNE 2020

- Founding member of the Teknofest 2018 UHAL Rocket Team (Finalist)

EXPERIENCE

Derin Teknoloji | AI & Backend Intern (Volunteer & Mandatory)

March 2025 - September 2026

- Focused on Natural Language Processing(NLP) and Retrieval-Augmented Generation(RAG) architectures. Developed robust backend services and optimized intelligent search pipelines.

Mesnet Bilişim | Intern

June 2024 - August 2024

- Focused on Machine Learning, significantly improving my skills in model training, data preprocessing, and algorithm selection.Learned detailed insights on how to establish and manage a startup as a game developer.
- Gained in-depth knowledge of developing machine learning solutions, including supervised and unsupervised learning techniques.
- Connected with a broad network of AI and data science professionals, expanding collaboration opportunities.

COMMUNITY & LEADERSHIP

Oyun Tasarımı ve Geliştiricileri Topluluğu | Co-Lead

2024 - 2026

- Led and organized game development events and community operations.

Dijital Oyun Geliştirme Ekibi CBU | Team

Nov 2023 - Sep 2024

- Participated in game development events organized by the community.

Game Factory | Team

Aug 2023 - Sep 2024

- Built a university-based community representing the Game Factory company.
- Organized various events in collaboration with teammates.

PROJECTS

TÜBİTAK 2209-B Research Project | Wearable AI-Enhanced Safety Vest

Partner Organization: BOSCH

Collaborating with Bosch and supervised by Ebru İğci Erbesler, this project focuses on developing a wearable safety vest equipped with sensors such as EKG, EMG, and GSR. The vest collects real-time biometric data from workers and processes it through a backend system using AI algorithms. The AI model analyzes workers' physical and mental states and provides actionable feedback such as "fit to work," "needs a break," or "unable to work", aiming to enhance workplace safety and productivity. Responsibilities include sensor integration, backend development, data processing, and AI model optimization for accurate recommendations.

Game Development With Unity

I have developed numerous games for various game jams and projects. You can find detailed examples of my work on my GitHub profile.

Erasmus+ Project: Digital Greening with Youth | Turkish Team Coordinator

Served as the coordinator of this Erasmus+KA152-YOU project in İzmir, which aimed to raise environmental awareness and digital integration among young participants across 5 countries.

Teknofest 2018 Rocket Project: Uhal Rocket Team(Finalist)

As a founding member of the UHAL Rocket Team (Ulubatlı Hasan Anatolian High School's official Teknofest Rocket Team), I played a key role in developing and optimizing the rocket's software and aerodynamics. Our team successfully reached the finals of Teknofest 2018, securing a place among the top 8 teams at the Salt Lake in Konya. Throughout the competition, we received hands-on training from leading organizations, including ROKETSAN and ASELSAN, which further enhanced our technical expertise and project development process.

Teknofest 2024–2025 Air Defense Competition | Computer Vision Developer

Participated in the Teknofest 2024-2025 Air Defense Systems Competition. I contributed to the team by developing computer vision-based modules for target detection and tracking as part of the software development group.

Sporistasyon Mobile & Web App | Developer – Completed

Developed a mobile application for Özlüce Tennis Courts in Bursa, enabling users to make reservations, rent courts, and create tournaments. Also built a professional website for the platform, providing a seamless user experience across devices.

ABOUT ME

Languages: Fluent in English, Native Turkish,

Interests: Artificial Intelligence, Game Design, Basketball, History, Cinema, Table tennis, Tennis, Swimming(6 years of experience)

Technical Skills: Python, PHP, C, C#, JavaScript, C++, Java, CodeIgniter 4, Flask, TensorFlow, PyTorch, BERT, RAG, NLP, Computer Vision, Ollama, Gemini API, Git/GitHub, Embedded Systems

.
